The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 4 is rejected under 35 U.S.C. 102(b) as anticipated by Iannuzo (US 5,589,762). Iannuzo discloses a voltage reference circuit (30; fig. 1) which is disclosed as a stable reference voltage circuit such as a Brokaw bandgap cell (col. 3, lines 10-15). The output of the Iannuzo bandgap cell is connected to an adjust module shown as adaptive control 26 to boost the supply when higher power is required.

Claims 5-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The art of record does not show the adjustable voltage follower module.

Claims 1-3 and 8-11 are allowed. The art of record does not show the DAC and adjustable bandgap module.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6239652 B1 to Oh et al. discloses a reference bandgap section and an op-amp boost section for "stress" mode. US 6583661 B1 to Tanji et al. discloses a compensation circuit to compensate a bias voltage for supply fluctuation. US 5966039 A to Koglin et al. a supply and temperature dependent linear signal generator.

US 6621432 B1 to Ganci discloses a DAC and bandgap voltage reference to generate a stable bias voltage. US 20030001632 A1 to Anderson et al. discloses (fig. 6) a voltage reference circuit, voltage buffer and load, such as a PDA.
